

Day 3 — Task 1: Improve Panwar Knitwear

Audit and improvement of an AI-assisted website redesign

Submitted by: **Samiya Sehgal** | URN: **2302662** | AI Bootcamp

Client: Panwar Knitwear, Ludhiana, Punjab (est. 2016)

Version 1 — before improvements	panwarknitwear-weld.vercel.app
Version 2 — after improvements	panwar-knitwear-improved.vercel.app

Objective

An existing AI-assisted redesign of panwarknitwear.com was audited as a real business website rather than a portfolio piece. The site serves wholesale and bulk buyers evaluating a knitwear manufacturer, so the measure of success is whether an anonymous visitor becomes a qualified enquiry. The audit compared both the original site and the redesign, then the five highest-impact defects were fixed. No business facts were invented at any stage.

Five key improvements

#	Area	Before	After
1	Enquiry form	Displayed “Enquiry received” but no backend was configured, so every enquiry was silently discarded .	Submits into WhatsApp with all fields pre-filled. No message ever claims receipt the site cannot prove.
2	Catalogue link	Hard 404 on any direct link, refresh or search-engine crawl of the 29-product catalogue.	Routing config deployed. The catalogue is now linkable, refreshable and crawlable.
3	Product specs	Sizes, weights and article numbers shown as empty placeholders — less detail than the old site .	Recovered from the client’s own pages: 28 size ranges, 25 article numbers , and confirmed fabric weights up from 7 to 14 of 29 .
4	Mobile usability	Enquiry button invisible yet tappable ; two of six product categories hidden off-screen behind a swipe.	Controls always visible on touch, no hidden tap targets, and all six categories on screen.
5	Credibility & SEO	Nine placeholder tokens live; trust badges unclickable; no favicon, sitemap or schema; broken link previews.	Placeholders cut to five; badges are verified links ; favicon, sitemap, schema and working previews added.

Defect 1 is the most significant: a lead-generation site that deletes leads while reporting success has negative value to the business.

Notes on the two most important fixes

1. The enquiry form. The submit handler posted to an environment variable that was never set. With no endpoint, the request resolved as though it had succeeded, so the interface showed a success message and cleared the form. The warning was suppressed in production builds, which is why the fault was invisible. The form now hands the enquiry to WhatsApp, which is where this trade replies, and states plainly that nothing was sent from the page itself.

3. Restored product specifications. The strongest finding of the audit was not a design flaw. The redesign had removed real data the original site still publishes — size ranges, fabric weights and factory article numbers — and replaced it with placeholders. On the first question a wholesale buyer asks, the new site was therefore less useful than the one it replaced. That data was recovered from all 29 of the client's own product pages, so nothing was invented. Catalogue search was also extended to match the trade vocabulary buyers actually type, such as *filice*, *ben collar* and *dora pocket*; a search for the brand name “Zonixa” returned no results before and returns 28 now.

Verification performed

- Both routes loaded directly; production build completes with no errors.
- 62 links checked — none dead. 19 buttons — all labelled. 25 images — all with alternative text. No console errors.
- Form validation blocks submission and focuses the first invalid field; valid input produces a correctly formatted enquiry.
- Keyboard navigation, modal focus trapping and reduced-motion preferences all confirmed working.
- Tested at 375 px width: no horizontal overflow, no hidden controls, all categories reachable.

Scope not covered in this pass

Image optimisation remains the largest outstanding performance item: the site serves roughly 6.7 MB of unoptimised photographs. A buyer FAQ section and a minimum mobile text size were also deferred. Five values still shown as placeholders — minimum order quantity, lead time, monthly capacity, fit and some fabric weights — require confirmation from the business owner and were deliberately not estimated.
